1969, 70, & 71 124 Sedan  
and Station Wagon.

# FIAT SERVICE LETTER

SUBJECT: ELECTRICAL SYSTEM

VEHICLES: 128 MODELS

CONDITION: Erratic operation of the charging system or ignition switch.

CAUSE: Possible loose, broken or corroded connections at the wiring junction block attached to the left reinforcement member inside the engine compartment.

CORRECTION: The charging system used in the 128 models utilizes a wiring junction block connecting the alternator to the fuse box, ignition switch and the battery.

In order to prevent time consuming efforts being spent trying to locate problems caused by this situation, this junction block should be inspected to insure that the wire connections are clean and secure.
