# **FIAT SERVICE LETTER**

**SUBJECT:** ROOF PANEL

**VEHICLES:** 1981 STRADAS

**SERVICE**

**INFORMATION:** Due to the standardization of body parts for the world wide market, the 1981 Stradas have a 1 3/16" (30mm) diameter hole in the front center portion of the roof. This hole is used for the mounting of a special antenna in the European market.

Since this antenna mounting hole will not be utilized on U.S.A. versions, the hole is plugged at the Factory with a sheet metal plug painted the same color as the car.

Installation of radio antennas in U.S. market should continue to be done on the right side of the lower windshield cowl as with previous year Stradas.
